

Big Results: Tangible Return on Investment

Experienced backpackers pack light to gain maximum efficiency. They'd never pack a compass in one backpack, carabineers in another and a flashlight in a third. Likewise, efficient organizations shouldn't have separate data, voice and video networks. IP Telephony streamlines all of those functions into a scalable, simplified infrastructure.

If you're planning to replace your existing legacy phone system or are constructing a new building, it makes sense to consider the many benefits of an IP Telephony solution. CSI's Solution Specialists will provide you with a compelling and credible customer return on investment (ROI). This type of analysis is critical in making a decision to implement a converged network. We'll show you on paper how IP Telephony can dramatically reduce the cost of your voice and data networks.

Make communication easier. Network administrators and end users alike benefit from converting to an IP system. IP Telephony builds on your existing network and makes moves, adds and changes a seamless process. An IP Telephony system includes features you'd find with any standard phone system such as automated attendant, voicemail, call forwarding and caller identification. Additionally, end users enjoy features such as a corporate directory and Unity, a feature that allows you to receive voicemail as an e-mail message.

Reduce costs and enhance communication

- **Standardized:** With IP Telephony (IPT) your organization can extend consistent communication services to all users.
- **Convergent:** Implement IPT as part of your existing network infrastructure to reap the benefits of a converged network of voice, video and data.
- **Scalable:** If your organization is looking ahead to the future and planning for growth, know that our IPT solutions are expandable. With solutions ranging from 5 users to 30,000 users, we're ready to grow when you do.
- **Economical:** With CSI's IPT assessment, you'll learn how this new phone system will save you money, make your staff more productive and reduce administrative burdens.
- **Accessible:** Imagine being on the road and still being able to handle calls on your extension as if you were in the office. Cisco's IP Softphone provides this type of remote access for employees on the go.
- **Productive:** Improve employee productivity through integration with innovative applications. Teachers can record pupil attendance via the phone. Employees can record time and attendance via the phone. The possibilities are endless.
- **Consolidated:** Check your voicemail, e-mail and faxes all in a single inbox on your PC or laptop.
- **Manageable:** Now managing the phone system is easy with seamless moves, adds and changes.
- **Reliable:** IPT eliminates single points of failure, is designed to be fully redundant and guards against local disruptions in service.
- **Expert:** When it comes to IPT implementation, CSI has a wide range of experience. Our installs range from 30 phones at a small city hall to over 7,000 phones for a major school district...one of the largest Cisco IPT implementations in the world!
