

## ••• School Nutrition Reporting

### FEATURES

- Simplify the preparation of reports required for claiming reimbursement under school lunch and breakfast programs. It also interfaces to the district accounting system to produce specialized financial reports and meal cost information for food service management.
- The system will create a journal entry to automatically record the monthly USDA reimbursement.
- Abbreviated account codes can be defined and used to speed up the entry of revenue from daily meal sales.
- Input screens are provided to enter meal counts. With the proper interface in place, this information can also be automatically imported from your point of sale system.
- Meal sales can be recorded as deferred revenue and automatically distributed to revenue based on the number of meals actually served during the month.
- The USDA reimbursement for free and reduced meals is automatically calculated and reported based on meal counts entered and reimbursement rates stored in parameter files.
